Deep integration between LinkedIn Learning and Vision

Information Services have recently completed an integration between LinkedIn Learning and Vision. This means that you can now search or browse LinkedIn Learning content directly from within Vision, saving you time and effort in working between these Systems, if you wish to augment your Vision Course with LiL content.

To browse this new feature, simply click on Partner Content and select Content Market, as shown on the right.

Then click the LinkedIn Learning button in the Content Provider list.

Now you’ll be able to browse popular courses or search for relevant content and insert links to them within your Vision course, saving you time and effort.

To insert content, click the checkbox against your preferred content, followed by the Submit button as below.

Once you confirm and Submit the Content Selection options, your content will be added into your Vision Course page.
