MSc International Marine Science
BE FUTURE MADE 2020/21
The programme offers students with a background in marine biology, geology or geography the opportunity to integrate their expertise in the wider marine science context.

The highly interdisciplinary programme aims to understand the biology, chemistry, geology and physics of this dynamic marine system, which is so central to all our lives. It also considers the overarching influence of climate change and how policy can be brought to bear on managing the resources of the ocean as part of the Blue Economy.

PROGRAMME STRENGTHS

• Students benefit from internal expert supervision as well as opportunities to work with external partners, both in the UK and internationally.
• Opportunities to develop skill sets in practical hands on data gathering from tropical and temperate environments.
• Opportunity to conduct research projects around the world.
• Opportunities to develop skill sets in scientific diving including surveying, imaging and media aspects.
