PROGRAMME DETAILS
Programme Code: F2R1-HRI
Department: Computer Science
Main Award: MSC - Master of Science
Full Award Title: Master of Science in Human Robot Interaction
Level: Postgraduate Taught

LOCATION OF STUDY
Edinburgh Y Scottish Borders N Orkney N
Dubai N Malaysia N Approved Learning Partner N
Independent Distance Learners N Collaborative Learning Partner N Other N

ASSOCIATED AWARDS
Programme Code | Award | Title
--- | --- | ---
F2A3-ZZZ | PGCERT | Postgraduate Certificate in Computer Science
F2R1-HRI | MSC | MSc Human Robot Interaction
F2R2-HRI | PGDIP | Postgraduate Diploma in Human Robot Interaction

ACCREDITATION
Accreditation will be sought from The Chartered Institute for IT (a.k.a. BCS) when it next visits Heriot-Watt University in 2020 as part of its 5 year cycle of visits.

LEARNING OUTCOMES – SUBJECT MASTERY
Understanding, Knowledge and Cognitive Skills

○ Critical understanding of the main theories, principles and concepts relating to the domain of human robot interaction including terminology, conventions, standards and methodologies.

○ Understanding and use of a significant range of the main skills, techniques and practices in robotic software engineering, and a range of specialised skills, research and investigation techniques, and practices in human robot interaction informed by current practices within the AI, HCI and Robotics domains.

○ Broad and deep knowledge of the HRI areas of AI, data mining, machine learning, search and optimization, intelligent agents, knowledge representation and inference, planning, as well as application-based knowledge and skills relating to HRI, and specialist knowledge and skills in applications relating to a number of specialist areas such as automation, conversational agents, data visualization and analytics, robotics and virtual reality.

Scholarship, Enquiry and Research (Research Informed Learning)

○ Extensive, detailed and critical understanding of at least one specialist area within the
domain of HRI application development obtained through researching the background to a substantial and challenging HRI engineering project that incorporates a multimodal interface by personal scholarship, design and development of a detailed HRI solution.

- Detailed knowledge and understanding of intelligent software engineering relating to multimodal interface application developments as well as the practical skills in how to exploit them in support of original and creative HRI application development.

- Specialist and critical knowledge, understanding and skills in a number of mainstream and specialist areas within the domain of HRI application development including robotics, automation, conversational agents, data mining and data visualization.

### LEARNING OUTCOMES – PERSONAL ABILITIES

#### Industrial, Commercial and Professional Practice

- Demonstrate critical awareness of current issues within HRI application development, and make informed judgements about them in the light of relevant professional standards.

- Demonstrate an awareness of professional and research issues in the HRI discipline, and an ability to critique current techniques and practice.

#### Autonomy, Accountability and Working With Others

- Work autonomously and within teams, as appropriate, demonstrating a capability for both taking and critically reflecting on roles and responsibilities.

- Develop and utilise advanced problem-solving skills and techniques in the shared development of original and creative solutions to general and specialist HRI engineering issues.

- Develop and demonstrate skills and techniques in communication with peers and academic/industrial staff, using a range of appropriate methods to suit different levels of knowledge and expertise within the audience.

### Communication, Numeracy & Information and Communications Technology
F2R1-HRI Master of Science in Human Robot Interaction

- Develop and demonstrate the ability to communicate and present the main issues involved in HRI application development to a literate audience with appropriate use of modern presentational tools and aids.

- Demonstrate appropriate use of methods of calculation and estimation involved in planning HRI engineering solutions and solving multimodal interface design of such HRI applications as well as study them from a research perspective.

**APPROACHES TO TEACHING AND LEARNING**

This programme is offered in a traditional campus-based, cohort model. Within the timetable, courses offer traditional lecture-based materials, small group tutorials and a variety of laboratory-based practicals. Students are expected to complete coursework in groups, teams and pairs, as well as individually, and courses offer a range of types of coursework for assessment, from discursive essay-style assignments to code design and generation. In some courses, team teaching approaches are adopted to provide additional support and variety, and electronic support, in the form of email lists, newsgroups and bulletin boards are widely used to disseminate information and support student communication and practice.

**EDUCATIONAL AIMS OF THE PROGRAMME**

- Detailed knowledge and critical understanding of the main areas of human robot interaction (including theories, principles and concepts). Significant range of principal and specialist skills, techniques and practices in the HRI domain.

- Specialist knowledge of HRI techniques as they apply to developing interactive multimodal interfaces and HRI applications.

- Ability to critically review existing practice and develop original and creative solutions to problems within the human robot interaction domain.

- Ability to communicate and work effectively with peers and academic staff in a variety of tasks, demonstrating appropriate levels of autonomy and responsibility.

- Ability to plan and execute a significant project of research, investigation or development in a specialist area within artificial intelligence, demonstrating extensive, detailed and critical understanding of that specialism.
ASSESSMENT POLICIES

Postgraduate programmes consist of two phases:

• A **taught phase**, consisting of a set of 8 taught courses, some mandatory and some optional, defined in the programme structure, where the students will study over two semesters. Assessment of the taught phase is through a variety of methods including coursework and/or examination. Students must submit all elements of assessment before being permitted to progress.

• A **dissertation phase**, consisting of two stages: an appropriate technical research project and project dissertation report, and a poster and demonstration based presentation.

• Students will normally complete the taught phase, at which point progression to the dissertation phase is dependent on assessed performance. To progress students must meet the criteria stipulated in point 9 below in the taught material.

• Any student will be able to retake the assessment of up to a maximum of 3 courses at the next opportunity, subject to payment of the appropriate fees to the University, and may be required to do so to obtain the necessary credits for completion of their programme or for progression. Students may only resit courses for which their examination grade is E or F (or a D but only if that is required for them to qualify for an MSc degree). The method of reassessment for each course is specified in the appropriate course descriptor.

• Students meeting the required standards for Masters in the taught phase (set out in point 9 below) will be permitted to progress to the dissertation phase.

• Students meeting the required standards for Postgraduate Diploma and Postgraduate Certificate (set out in point 9 below) in the taught phase, but not meeting the Masters standard, will not be permitted to progress to the dissertation phase. Students may be recommended to graduate with a Postgraduate Diploma or a Postgraduate Certificate at this point.

• Students failing to meet the required standards for Postgraduate Diploma and Postgraduate Certificate (set out in point 9 below) in coursework and examination in the taught phase will not be permitted to progress to the dissertation phase, nor will they be eligible for any award.

1. To obtain an MSc Degree, candidates must gain 180 credits and must satisfy the examiners by achieving the required standards (set out in point 9 below) in two components:

   • Assessed taught material
   • Dissertation (set out in point 9 below)

2. To obtain a Postgraduate Diploma candidates must gain 120 credits and must satisfy the examiners by achieving the required standards (set out in point 9 below) in the assessed taught material

3. To obtain a Postgraduate Certificate candidates must gain 60 credits and must satisfy the
4. Taught courses will be assessed by a variety of techniques appropriate to the learning outcomes of the specific course. Where a course is assessed by more than one component (for example examination and coursework or more than one item of coursework) students must complete each element of the assessment to a satisfactory level (Grade E or higher) to be permitted to proceed.

5. All course work must be submitted before the due date. Late submissions will only be accepted with the prior permission of the Programme Director.

6. In exceptional personal or medical circumstances students may be granted leave by the examiners to resit part or all of the assessment on one occasion only and at a date decided by the examiners, as stated in university regulations 4 and 5. This provision is in addition to the provision that students may retake assessment for courses in which they have achieved a grade less than D.

7. Dissertations must be submitted on or before the publicised submission date; dissertations submitted after that date and without the prior consent of the Programme Director may be assessed at a penalty.

8. Allowance for poor performance in or non-submission of a component on medical grounds is normally made only where supported by written testimony from a professional health practitioner. Such testimony must be lodged with the Programme Director prior to the Examination Board meeting.

9. The level of achievement expected in each component is an average of:

- 40% for the Postgraduate Diploma and Certificate
- 50% for the MSc Degree
- MSc candidates displaying exceptional merit by obtaining a credit weighted average of 70% or more (at the first attempt) over 8 courses and the dissertation at grade A may be recommended for the award of MSc with Distinction. Postgraduate Diploma candidates displaying exceptional merit by obtaining a credit weighted average of 70% or more (at the first attempt) over 8 courses at grades A-C may be recommended for the award of Postgraduate Diploma with Distinction. Both distinction awards are at the discretion of the Exam Board.

**Required Standards:**
Candidates must achieve the following minimum levels of performance in:

**Assessed Taught Material**

- A credit weighted average across the 8 courses of 50% or better for Masters, with F21RP Research Methods at 45% or above and all others at grade D or above.
- A credit weighted average across the 8 courses of 40% or better for Postgraduate Diploma (120 credits) or a credit weighted average across 4 courses of 40% or better for Postgraduate Certificate (60 credits), with no course returning a result of less than grade E.
- All elements of assessment for each course must be completed to a satisfactory level (grade E).

**Dissertation**

- An average of 50% or better for Masters
- The Dissertation is conducted in two stages, these being:
  - Stage 1: A write up in a dissertation report (90%)
  - Stage 2: A poster presentation and demonstration of the project work and results (10%)

RE-ASSESSMENT (PG)

1. A student who has been awarded a Grade E or F in a course may be re-assessed in that course. A student who has been awarded a Grade D in a course may be re-assessed in that course in order to proceed to or be eligible to receive the award of Masters.

2. A student shall be permitted only one re-assessment opportunity in a maximum of three taught courses. The opportunity for re-assessment in four or more taught courses shall be at the discretion of the Progression Board.

3. Any further re-assessment opportunities in a course will require the approval of the Postgraduate Studies Committee.

4. A student may be permitted, at the discretion of the Progression Board, to be re-assessed in the dissertation, project or other supervised research component of the course of study.

PROGRESSION TO DISSERTATION/PROJECT

In accordance with University Regulations, to progress to Masters level a minimum of Grade C is required.
