ACCREDITATION

We will seek accreditation for this 2 year MSc from the Chartered Institute of IT (also know as the BCS) when they next visit us in 2020 as part of their 5 year cycle of visits. They last visited us in 2015.

LEARNING OUTCOMES – SUBJECT MASTERY

Understanding, Knowledge and Cognitive Skills

- Critical understanding of the main theories, principles and concepts relating to the domain of human robot interaction including terminology, conventions, standards and methodologies.

- Understanding and use of a significant range of the main skills, techniques and practices in robotic software engineering, and a range of specialised skills, research and investigation techniques, and practices in human robot interaction informed by current practices within the AI, HCI and Robotics domains.

- Broad and deep knowledge of the HRI areas of AI, data mining, machine learning, search and optimization, intelligent agents, knowledge representation and inference, planning, as well as application-based knowledge and skills relating to HRI, and specialist knowledge and skills in applications relating to a number of specialist areas such as automation, conversational agents, data visualization and analytics, robotics and virtual reality.

Scholarship, Enquiry and Research (Research Informed Learning)

- Extensive, detailed and critical understanding of at least one specialist area within the domain of HRI application development obtained through researching the background to a
substantial and challenging HRI engineering project that incorporates a multimodal interface by personal scholarship, design and development of a detailed HRI solution.

• Detailed knowledge and understanding of intelligent software engineering relating to multimodal interface application developments as well as the practical skills in how to exploit them in support of original and creative HRI application development.

• Specialist and critical knowledge, understanding and skills in a number of mainstream and specialist areas within the domain of HRI application development including robotics, automation, conversational agents, data mining and data visualization.

**LEARNING OUTCOMES – PERSONAL ABILITIES**

**Industrial, Commercial and Professional Practice**

• Demonstrate critical awareness of current issues within HRI application development, and make informed judgements about them in the light of relevant professional standards.

• Demonstrate an awareness of professional and research issues in the HRI discipline, and an ability to critique current techniques and practice.

**Autonomy, Accountability and Working With Others**

• Work autonomously and within teams, as appropriate, demonstrating a capability for both taking and critically reflecting on roles and responsibilities.

• Develop and utilise advanced problem-solving skills and techniques in the shared development of original and creative solutions to general and specialist HRI engineering issues.

• Develop and demonstrate skills and techniques in communication with peers and academic/industrial staff, using a range of appropriate methods to suit different levels of knowledge and expertise within the audience.

**Communication, Numeracy & Information and Communications Technology**

• Develop and demonstrate the ability to communicate and present the main issues involved in HRI application development to a literate audience with appropriate use of modern presentational tools and aids.

• Demonstrate appropriate use of methods of calculation and estimation involved in planning
HRI engineering solutions and solving multimodal interface design of such HRI applications as well as study them from a research perspective.

**APPROACHES TO TEACHING AND LEARNING**

This programme is offered in a traditional campus-based, cohort model. Within the timetable, courses offer traditional lecture-based materials, small group tutorials and a variety of laboratory-based practical training. Students are expected to complete coursework in groups, teams and pairs, as well as individually, and courses offer a range of types of coursework for assessment, from discursive essay-style assignments to code design and generation. In some courses, team teaching approaches are adopted to provide additional support and variety, and electronic support, in the form of email lists, newsgroups and bulletin boards are widely used to disseminate information and support student communication and practice.

**EDUCATIONAL AIMS OF THE PROGRAMME**

- Detailed knowledge and critical understanding of the main areas of human robot interaction (including theories, principles and concepts). Significant range of principal and specialist skills, techniques and practices in the HRI domain.

- Specialist knowledge of HRI techniques as they apply to developing interactive multimodal interfaces and HRI applications.

- Ability to critically review existing practice and develop original and creative solutions to problems within the human robot interaction domain.

- Ability to communicate and work effectively with peers and academic staff in a variety of tasks, demonstrating appropriate levels of autonomy and responsibility.

- Ability to plan and execute a significant project of research, investigation or development in a specialist area within artificial intelligence, demonstrating extensive, detailed and critical understanding of that specialism.

**ASSESSMENT POLICIES**

The two year MSc in Human Robot Interaction is a full-time programme comprising two stages in successive years.

**Stage 1**
This stage consists of 8 taught courses, 4 mandatory and 4 optional, defined in the programme structure, which the students will study over two semesters. Assessment of the taught phase is through a variety of methods including coursework and/or examination. Students must submit all elements of assessment before being permitted to progress.

- Progression to stage 2 depends on passing 8 courses at grade D or better with an 8 course average of 50% plus getting a grade C or better on F21SF, F20AD and F29AI. If students are required to take the options C69RP and C69RQ to enhance English to postgraduate study level, then these courses must also be passed at grade C or above.

- Students may retake the assessment of up to a maximum of 3 courses at the next opportunity, subject to payment of the appropriate fees to the University, and may be required to do so to obtain the necessary credits for progression or exit. Students may only resit courses for which their assessment grade is E or F (or a grade D but only if a grade C is required in order to progress to the next stage).

- Students may exit at the end of this stage with a Graduate Diploma in Computer Science if they get credits for 8 courses at grade E or better with an 8 course average of 50%. They may exit with a Graduate Certificate in Computer Science after at least 1 semester of study if they get credits for 4 courses at grade E or better with a 4 course average of 40%.

- Students not meeting either the requirements for progression or for a Graduate Diploma or Graduate Certificate will not be eligible for any award.

Stage 2

This stage consist of two phases:

- A taught phase, consisting of a set of 8 taught courses, 4 mandatory and 4 optional, defined in the programme structure, which the students will study over two semesters. Assessment of the taught phase is through a variety of methods including coursework and/or examination. Students must submit all elements of assessment before being permitted to
progress.

- A dissertation phase, consisting of two stages: an appropriate technical research project and project dissertation report, and a poster and demonstration-based presentation.

- Students will normally complete the taught phase, at which point progression to the dissertation phase is dependent on assessed performance as being of Masters level standard. To progress students must get grade D or better in 8 stage 2 courses, get an 8 course average of 50% and pass F21RP with a mark of at least 45%.

- A student may be reassessed in up to a maximum of 3 courses at the next opportunity, subject to payment of the appropriate fees to the University, and may be required to do so to obtain the necessary credits for completion of their programme or for progression. Students may only resit courses for which their assessment grade is E or F (or a D in order to proceed to or qualify for an MSc degree). The method of reassessment for each course is specified in the appropriate course descriptor.

- Students meeting the required standards for Postgraduate Diploma and Postgraduate Certificate in the taught phase, but not meeting the Masters standard, will not be permitted to progress to the dissertation phase. Students may be recommended to graduate with a Postgraduate Diploma or a Postgraduate Certificate at this point.

- Students failing to meet the required standards for Postgraduate Diploma and Postgraduate Certificate in coursework and examination in the taught phase will not be permitted to progress to the dissertation phase, nor will they be eligible for any award.

COMPOSITION NOTES(PG)

In Stage 1 students study on 8 taught courses (4 mandatory and 4 optional) worth 15 credits each.

In Stage 2 students study on 8 taught courses (4 mandatory and 4 optional) worth 15 credits each followed by a MSc dissertation project worth 60 credits.

RE-ASSESSMENT (PG)

1. A student who has been awarded a Grade E or F in a course in stage 1 or 2 may be reassessed in that course. A student who has been awarded a Grade D in a course in stage
2 may be re-assessed in that course in order to proceed to or be eligible to receive the award of Masters.

2. A student shall be permitted only one re-assessment opportunity in a maximum of three taught courses in each stage. The opportunity for re-assessment in four or more taught courses in each stage shall be at the discretion of the Progression Board.

3. Any further re-assessment opportunities in a course will require the approval of the Postgraduate Studies Committee.

4. A student may be permitted, at the discretion of the Progression Board, to be re-assessed in the dissertation, project or other supervised research component of the course of study.

PROGRESSION TO DISSERTATION/PROJECT

In accordance with University Regulations, to progress to Masters level a minimum of Grade C is required.
