This module aims to provide postgraduate students with a broad knowledge of basic concepts in financial mathematics including interest rates, arbitrage, stochastic interest rates, inflation and continuous cash flows.

On completion of this module the student should be able to:

- Know how to discount and accumulate cash flows and calculate internal rates of return.
- Know the derivation of formulae for standard cash flows.
- Derive and solve equations of value.
- Understand the principle of equivalence
- Understand the theory and practice of loan repayments.
- Understand measures of investment performance
- Value fixed interest securities subject to tax and determine their yield.
- Understand the concept of arbitrage and the no-arbitrage assumption
- Calculate the forward price and the value of forward contracts using arbitrage free pricing.
- Develop a replicating portfolio for forward contracts
- Understand forward interest rates and the term structure of interest rates.
- Calculate the duration and convexity of a set of cash flows.
- Understand Redington's theory of immunization and apply it in simple situations
- Understand simple stochastic interest rate models.
- Calculate the accumulated profit of projects using deterministic interest rates
- Understand the concept of inflation and calculate inflation adjusted payoffs
- Find the real yield and the monetary yield of inflation linked gilts
- Calculate the break-even rate of inflation
On completion of this module the student should be able to

- demonstrate knowledge and critical understanding of the basic concepts and models in financial mathematics.
- demonstrate the ability to learn independently
- manage time, work to deadlines and prioritize workloads
- present results in a way that demonstrates that they have understood the technical and broader issues in financial mathematics

**SYLLABUS**

- Rates of interests
- Present values, equations of value and yields
- Principle of equivalence
- Annuities
- Loan schedules and mortgages
- Project appraisal and discounted cash flows
- Measures of fund performance
- Fixed interest securities
- Inflation and index-linked securities
- Continuous Compounding, force of interest and continuous cash flows
- Immunisation, duration and convexity
- Arbitrage and forward contracts
- The term structure of interest rates and forward rates
- Stochastic interest rate models
