COURSE DETAILS
Course Code: F20SA
Full Course Title: Statistical Modelling and Analysis
SCQF Level: 10
SCAF Credits: 15
Available as Elective: No

DELIVERY LEVEL
Undergraduate: Yes  Postgraduate Taught: No  Postgraduate Research: No

Additional Information: 

COURSE AIMS
The aim of this course is to learn and apply a range of Statistical Modelling and Analysis techniques applicable for data analysis.

LEARNING OUTCOMES – SUBJECT MASTERY

• Detailed understanding of the concepts, issues, principles and theories of statistical modelling and analysis

• Understanding and practical knowledge of statistical modelling and analysis techniques to apply suitable methodologies for a given task

• Practical experience of analysing, designing, implementing and validating experiments using common statistical techniques.

LEARNING OUTCOMES – PERSONAL ABILITIES

• Ability to deal with and make informed judgements about statistical models and analysis

• Exercise autonomy and initiative in performing data analysis.

• Showing initiative and team working skills in shared data analysis. (PDP)

• Demonstrate reflection on statistical modelling and analysis issues. (PDP)

SYLLABUS
A practical understanding of:
• Basic probability concepts: Random variables and their distributions; how distributions relate to sampling scenarios.
• Joint distributions, Sums of random variables, Central limit theorems
• Classical inference: Point estimation, moment estimators and maximum likelihood; Confidence intervals – calculation and interpretation; Hypothesis testing and p-values
• Essentials of Bayesian inference: Priors and posteriors; Credible intervals; Predictive distributions
• Modelling approaches: Regression and ANOVA;
• Multivariate exploratory techniques: Principal Components Analysis + Factor Analysis; Introduction to non-parametric methods
• Practical elements in R or Python
