### COURSE DETAILS

**Course Code:** F18XD  
**Full Course Title:** Mathematics for Engineers and Scientists 4  
**SCQF Level:** 8  
**SCAF Credits:** 15  
**Available as Elective:** No

Additional Information:

### COURSE AIMS

This aims to provide a fundamental course in the basic methods of mathematical modelling with emphasis on linear algebra. It will give an introduction to MATLAB as a programming language, which will be used for solving various mathematical problems related to science and engineering.

### LEARNING OUTCOMES – SUBJECT MASTERY

By the end of the course, students should be able to:

- understand the basic terminology of linear algebra, Laplace transforms and analytic geometry.
- solve systems of linear equations by the method of Gaussian elimination.
- invert a matrix both by using Gaussian elimination and by computing cofactors.
- compute determinants, solve eigenvalue problems.
- understand how eigenvalue problems may arise in practical applications.
- diagonalize matrices.
- perform Laplace transforms and inverse Laplace transforms for most common functions.
- apply Laplace transforms to solve DEs and systems of DEs.
- perform basic vector operations.
- write equations of lines and planes and find angles between lines and planes.
- compute partial and directional derivatives of scalar and vector functions.
- write equations for piecewise approximation of curves and equations of tangent planes.
- apply Grad, Div and Curl operators.
- use MATLAB to: perform matrix and vector operations, solves systems of linear equations, find eigenvalues and eigenvectors of matrices, perform Laplace and inverse Laplace transforms, solve DEs.

### LEARNING OUTCOMES – PERSONAL ABILITIES

- Demonstrate the ability to learn independently
- Demonstrate knowledge of an area of mathematics.
- Manage time, work to deadlines and prioritise workloads

### SYLLABUS
Laplace Transform: Laplace Transforms, Inverse Laplace Transforms, Solving Differential Equations (DEs) and Systems of DEs with Laplace Transforms.

Linear Algebra: Systems of Linear Equations, Gaussian Elimination, Vectors and Matrices, Matrix Algebra, Inverse Matrices, Determinants, Eigenvectors and Eigenvalues, Applications to Differential Equations, Diagonalization of Matrices.

Note: 2nd year direct entry – A-Level/ AH in Mathematics Grade C or better or equivalent
