## Course Details

**Course Code:** F20NA  
**Full Course Title:** Network Applications  
**SCQF Level:** 10  
**SCAF Credits:** 15  
**Available as Elective:** No

### Delivery Level
- **Undergraduate:** Yes  
- **Postgraduate Taught:** Yes  
- **Postgraduate Research:** No

### Course Aims
- To impart knowledge and understanding of the theories, principles and protocols underlying the primary network applications on the Internet  
- To develop the ability to appreciate critically the range of network application technologies and standards  
- To give students significant development skills in a range of the principal network technologies, to grasp the main design and practical issues faced in their application, and confer the ability to select and apply relevant techniques for a given network application development problem.  
- To have students creatively develop in teams a substantial network application involving web and application server technologies to an original design of their own

### Learning Outcomes – Subject Mastery

- Extensive, detailed and critical knowledge and understanding of the theories, techniques and principles underlying the design of network applications and the range of their application  
- Theoretical and practical knowledge of the major network application types including email, web and chat applications and services  
- Critical awareness of protocols and standards underlying key network applications especially the web and of enabling technologies for network applications such as sockets, DNS, XML  
- Ability to design and develop useful network applications including web, email and chat software using apt technologies and languages: HTML, XML, JavaScript, CSS, Java applets, CGI, servlets, active web server pages, REST web services etc. to professional standards

### Learning Outcomes – Personal Abilities

- Skills in selecting, applying and evaluating apt technologies in a professional way given a problem requiring network interaction  
- Ability to build on initial skills and knowledge by independent research using online resources  
- Showing initiative, creativity and team working skills in shared network application development

### Syllabus

Network services - Internet, DNS, sockets, services; e-mail - MIME, SMTP, POP, IMAP; web protocols - URIs, HTTP; web content - HTML, XML, XHTML, HTML5, CSS; web client programming - JavaScript, DOM, CSS3, DHTML; web server programming - CGI, servlets, SSI, JSP, PHP; web security - cookies, HTTP logins; textual conferencing - IM, IRC, implementing web chat; web services in XML - AJAX, SOAP, REST.
F20NA Network Applications
