COURSE DETAILS  
Course Code: F21SC  
Full Course Title: Industrial Programming  
SCQF Level: 11  
SCAF Credits: 15  
Available as Elective: No

DELIVERY LEVEL  
Undergraduate: No  
Postgraduate Taught: Yes  
Postgraduate Research: No  
Additional Information:

COURSE AIMS
- To develop proficiency in contemporary industrial programming languages and platforms;  
- To enable the elaboration and combination of system components in different languages;  
- To enable an agile and flexible response to changes in industrial practices;  
- To enable participation by industrial practitioners to provide context and applicability.

LEARNING OUTCOMES – SUBJECT MASTERY
- Critical appreciation of role of different programming paradigms in programming/managing systems  
- Autonomous problem analysis/solution  
- Critical understanding of core characteristics of contemporary operating systems and virtual machines  
- Detailed knowledge of key abstractions across programming languages  
- Technical proficiency in advanced language techniques in different programming paradigms.

LEARNING OUTCOMES – PERSONAL ABILITIES
- Ability to choose/deploy/combine appropriate languages, architectures and tools  
- Ability to employ an agile approach to software development

SYLLABUS
- Programming in a modern general purpose language e.g. C#, C++11  
- Programming for concurrency using state-of-the-art libraries and language extensions  
- Rapid prototyping in a major scripting language with associated libraries and frameworks, e.g. Python, PHP, Ruby, Lua  
- Coverage of advanced language features where languages have been met in earlier courses  
- Foresight of emerging programming language technologies  
- Practical experience with standard environments (Unix, Windows), virtual machines (.NET) and tools (e.g. compilers, debuggers, libraries, shell)

Pre-requisites: Programming skills in an object-oriented language such as Java or C++
